

Reforming Austria's Tax System

Prof. Dr. Alexander Rust, LL.M.

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 1

Challenges Ahead

- **National Debt:** 73.4% of GDP
=> Reduction to 60% of GDP
- Benefits for an **aging society**
- **Climate Change**

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 2

Solutions

- Stimulate **economic growth**
- Cut spending
- Privatization
- Increase taxes

Debt ceiling: 2017 Deficit should not be more than 0.45%

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 3

Dilemma

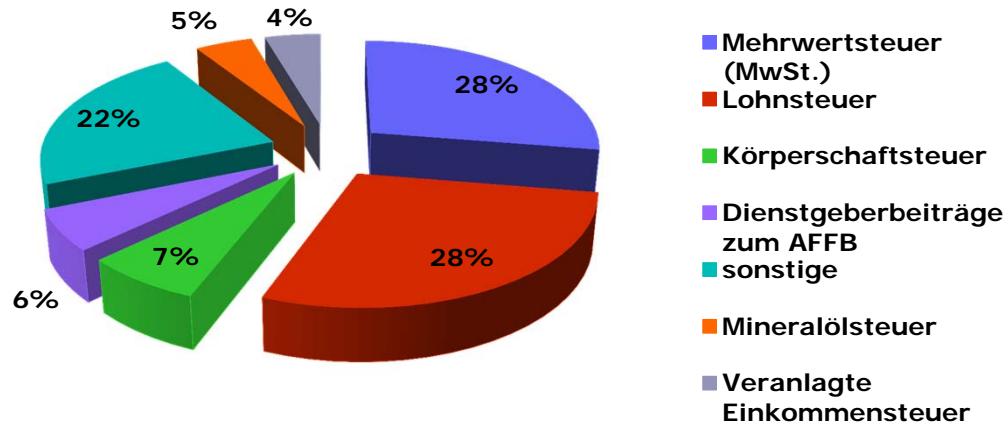

- Increasing taxes does not automatically lead to higher tax revenues and might restrict economic growth (Greece / Spain / Portugal)
- In small economies, lowering taxes will result in higher tax revenues.
- Taxation of inelastic factors

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 4

Tax revenues in Austria

Quelle: Statistik Austria; Berechnungsstand 30. September 2014

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 5

Income Tax Rates

Income	Tax rates
11,000 €	0%
25,000 €	36.5%
60,000 €	43.2%
> 60,000 €	50%

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 6

Tax Rates on Income from Labor

Income	Tax rates
11,000 €	0%
25,000 €	32.1%
60,000 €	38.0%
> 60,000 €	43.7%

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 7

Burden on Labor

- In Austria, **48.4%** of the labor costs consist of taxes and social security contributions.
- OECD average: 35.2%

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 8

Corporate Tax Rates

Year	Tax rate
1966	24-44% / Distribution
1972	30-55% / Distribution
1988	30%
1993	34%
2005	25%

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 9

VAT Rates

Year	Tax rate
1972	8% (reduced) / 16%
1984	10% (reduced) / 20%

Only Luxembourg (15%), Malta (18%), Cyprus (19%) and Germany (19%) have lower VAT rates.

Highest VAT rates can be found in Hungary (27%), Sweden (25%), Croatia (25%) and Denmark (25%)

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 10

Increase of VAT Rates?

- VAT is not born by enterprises. The VAT burden is passed on to the consumer.
- Exports are VAT exempt.
- Imports are subject to VAT.
but
- Less progressive.
- Rich people can save more while poor people have to spend more of their income on consumption.

Rate Reduction and Base Broadening

- Reagan Tax Reforms 1986
- Corporate Tax: Expense limitation rules
- Income Tax: Capital gains tax on sales of shares and on the sale of immovable property.
- Austrian Court of Audit (2013): **558 tax exemptions**. Administrative costs outweigh the benefit for the taxpayer.

Rate Reduction and Base Broadening

Countervailing Trend:

- Patent Box Regimes (new compromise)
- Holding Regimes

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 13

Tax burden on capital decreased

- Corporate tax rates went down
- Abolition of municipal business tax (1994)
- Abolition of wealth taxation (1994)
- Abolition of inheritance taxes (2008)
- Final capital yield tax on interest and dividend payments at a rate of 25%

but

- Private Foundation less attractive (2011: 25%)
- Introduction of a Financial Transaction Tax as of 2016.

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 14

Tax Secrecy

- Introduction of **Art. 26(5) OECD MC** in 2005.
- Austria's reservation withdrawn.
- FATCA IGA II signed 2014
- **Savings Directive:** Switch to automatic exchange of information in 2017
- **Mutual Assistance Directive:** Automatic exchange of information in 2017
- **OECD:** Automatic exchange of information in 2017
=> Bank secrecy only in purely domestic situations

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 15

Synthetic Income Tax

- Should interest income be taxed at progressive rates?
- Inflation adjustment
- Differences between equity and debt financing

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 16

Austria's Strengths

- Group taxation (2005)
- Half rate system / final capital yield tax
- International participation exemption and full deductibility of expenses
- Private Foundation regime (1993)

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 17

Austria's Strengths are watered down

- **Group taxation:**
 - Limited to companies in EU or exchange of information requirement
 - Deduction limited to 75% of profits of parent
- **Private Foundation regime:**
 - Remaining benefit is participation exemption. Annual costs are at least 10,000 €
 - More and more **expenses** are no longer deductible
 - Restricted loss carry forward
 - Bracket Creep (kalte Progression)
- **Predictability**

Institut für Österreichisches und Internationales Steuerrecht • www.wu.ac.at/taxlaw 18

Proposals

- **Reduce the tax burden on labor**

- Lower labor costs will attract more investments
- Abolition of exceptions / renders the system easier to administer
- Harmonize the basis for taxation and for social security contributions / one competent authority
- Increase retirement age
- Cut spending
- Negative income tax for low income earners (110 €)
“EITC”
- Municipal Tax (Kommunalsteuer)

Proposals

- **Create competitive advantages for businesses**

- Predictability
- Improve provisions on group taxation
- Abolish or soften the rules disallowing the deduction of expenses

Proposals

▪ Additional Funding:

- Increase VAT rates
- Progressivity:
 - Progressive tax rates for interest income
 - Reintroduce inheritance taxes (100-150 Mio €)
 - Abstain from levying a comprehensive wealth tax (110-150 Mio €) or one-time capital levy
